# WardKraft
Ship Station

FEATURES

Printer
DuplexPackSlip thermal label printing uses two thermal print heads to duplex print on a thermal-coated label. The Toshiba DB-EA4D two-sided thermal label printer is optimized for DuplexPackSlip labels.

Peeler
When the DuplexPackSlip label prints, the WardKraft Peeler automatically removes the label liner from the label. The label is taken from the printer and applied to the shipment.

Integrator
Minisoft's eFORMz integrates DuplexPackSlip labels with any WMS, ERP or order management system. eFORMz captures print output from these systems and formats it for printing on a DuplexPackSlip label.

ABOUT

Designed to produce DuplexPackSlip® thermal labels, the WardKraft Ship Station is an innovative package that includes a Toshiba DB-EA4D printer for two-sided thermal label printing, WardKraft's automated label peeler optimized for the Toshiba DB-EA4D, and Minisoft's eFORMz forms and label generation solution.
